

## Modular Pumping Packages

TMI Climate Solutions, a long-time manufacturer for Custom Air Handling Solutions, now offers a complete line of manufactured packaged systems with a solution from their Advanced Hydraulics Divisions. TCS modular pump packages are completely manufactured at the TCS Facility in Holly, Michigan. This allows the disruption to any job site to be minimal, as complete pumping modules would be manufactured off-site and then installed in place at any facility in less than a week. The final fit and finish of the modular pump package can be completed by the TCS Construction Services team or your local installer inside of the mechanical equipment room as needed, again making disruption to your facility minimal.

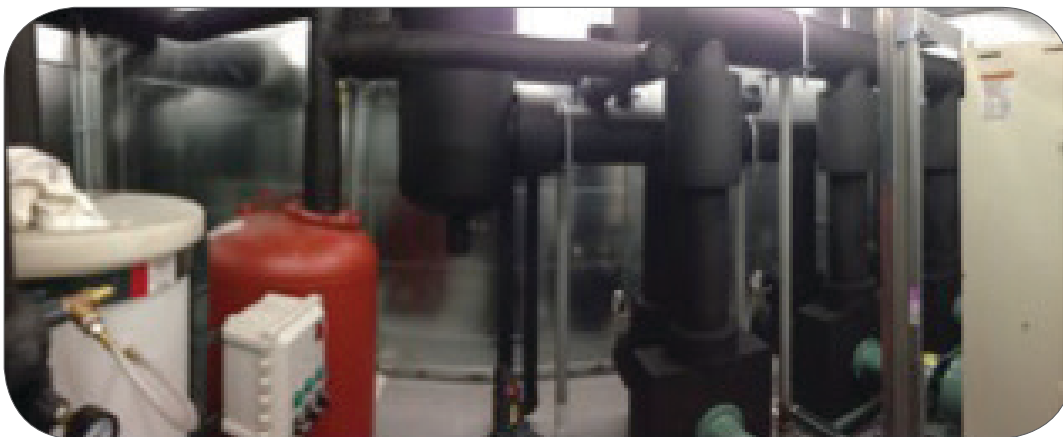

### Main Features

- Complete Electrical Switchgear Included
- Highly Efficient Variable Speed Pumps
- Industrial Controllers Where Required
- Complete Integration to Plant Facility Management via Lon or BACnet
- Hydronic Specialties including:
  - Air Separators
  - Expansion Tanks
  - Heat Exchangers
  - Control Valves
- 3D Cad Modeling For Direct Integration
- Custom Configurations for tight equipment rooms
- Enclosures for outdoor requirements as needed
- Insulation as required

From start to finish any Modular Pumping Package takes approximately 16-20 weeks to design, procure, manufacture and install with proper coordination. You as the owner have control over major equipment vendors, including the Pumps, Tanks and Electrical Gear. With the integration of the industrial grade controls, the owner sees no difference in this pumping system than one installed traditionally at any other facility worldwide.
